

EVE.2.X EMPURON VISUAL EFFICIENCY

EVE.2.X - Recording efficiency measured values and meters independently of manufacturers and supporting DIN EN ISO 50001

EVE.2.X is an IT system consisting of real-time integration components, database, server and reporting functions. Through the portal system Call up evaluations online. This means that all energy information is available with a few clicks. Due to the built-in high-performance database, the data is safely stored. The core element is the automatic reporting in the case of an error. In addition to saving energy, this allows increasing the availability of the technical process.

EDIT SANKEY DIAGRAMS

EVE.2.X allows Sankey diagrams to be freely designed. Whether online values are available or not, your company Sankey diagram can be manually assigned values from records, or online values can be transferred automatically. Online updates are even possible every minute, so that Sankey diagrams updated exactly represent the current energy flow.

Together with the cloud application of EVE - EMPURON VISUAL EFFICIENY you get the possibility to create and manage your diagrams in a portal function. If meters are transferred online to the cloud, you will receive the updated values also entered in the cloud at the exact time. Together with the diagram function, the cloud also offers a management function for created Sankey diagrams.
